MESH

MESH 304 – MESH 316

Description

Wire mesh braided at 94 meshes with a 304 or 316 stainless steel wire (0.0035"). It resists to maximum temperatures of 1400°F and has 0.0071" diameter holes. It offers an increased resistance to corrosion when in contact to chemical substances.

Applications

This strong wiring is used to protect mattresses or put inside to make them more rigid.
